Kick Speed Radar with Target

Assists teaching soccer kick accuracy and power. It measures the speed of the kick, so the player's ability to hit the target with power can be quantified. Uses proven Doppler radar technology that is attached to the back of the vinyl-covered foam rubber target. The radar sees through the target to measure speeds from 12 mph to 100 mph. The hand held target can be easily positioned to practice specific shot placements. Provides coaches and players with immediate feedback.

SS KICK-SR \$159.98 EA
