Perfect Circle for Fastpitch Pitchers

Develops muscle memory for pitching a softball correctly. Helps pitchers to keep the bottom part of the circle in close to the thigh. Perfect Circle provides instant feedback without the need of a coach watching. Elastic band holds a square cotton flap that fits around the upper thigh and extends out a few inches into the pitcher's release zone. When practicing windmill pitches for softball, the arm should touch the flap every time. An arm position too far from the thigh at the bottom can cause many problems, including control problems, lack of speed, undue stress to the shoulder socket and more. Teaches proper placement of the hand in the release zone. Excellent pitching aid for basic mechanics or advanced pitching mechanics such as fast ball, change-up, drop ball, screw ball, rise ball, and curve ball. Fits in your pocket. Developed by ASA certified and former collegiate pitching coach Mike Fairchild. Includes instructional CD and carrying case. Patent Pending. USA

Elastic Thigh Band

Cotton Flap

Practice windmill pitching and your arm should touch the flap every time. Teaches proper placement of the hand.

THROW-RITE™

Throw-Rite Pitcher's Training Device

Learn the proper form and basic bio-mechanics of baseball pitching and throwing. Throw-Rite is designed to show "fluid arm motion" and to give players instant feedback on the correct throwing motion. The two leather cover regulation baseballs are connected by a 2" nylon rope. When the arm moves properly through the arc of the delivery, the top ball travels without touching the thrower. When the player starts to "short arm" the ball, the top ball will flop over to hit the back of the hand. Instant feedback! Can be used for over-hand and side-arm delivery. Great for any player at any level: beginners that are starting out and learning the basics of throwing motion, and advanced players that are trying to perfect their skills until they become routine. When you throw and the ball hits you in the hand, it means that you are not using the proper arm arch and that your entire body is not being used properly. Drill sheet included. Patent pending. China
KS THROW-R \$34.00 EA 11.2 oz

Place your thumb on the bottom seam of the ball. Your index and middle fingers are positioned on each side of the connecting cord, as close to the ball as possible without touching the cord.

When proper mechanics are used, the top ball will remain extended from the ball in the throwing hand throughout the entire process.

If proper throwing mechanics are NOT used, the top ball will fall back onto the back of the throwing hand. This provides instant feedback that the arm was not fully extended which enables you to immediately correct yourself.

Develop Proper Throwing Mechanics With Instant Feedback
